

ANI MULTITONE SYSTEMS

SEÑALIZACION Y TELECONTROL offers an ANI system useful to control channel activity in communication networks or to monitor remote installations. The ANI encoders with a miniature connector and small size are easy to install in portable or mobile equipment in existing or new radio systems. The system is completed with the decoder console **DECO-100 with a 16 character display** or the **DECO-100** modem that sends the identification number to an IBM compatible computer via RS-232 serial port.

IN-100 MINI

- Multitone norms (5, 6 or 7 tones): CCIR, EEA, ZVEI1, ZVEI2, ZVEI3 and NATEL.
- Tone length from 20 to 125 ms.
- TOT and penalty timer with warning beep.
- Microphone mute during tone sequence.
- Independent emergency sequence.
- Channel busy lockout with programmable active level.
- Status input, allowing 3 different sequences.

IN-100 TAXI

With the **IN-100 TAXI** it is also possible to send 3 independent sequences, indicating the TAXI state (free, busy and emergency). Direct connection to the "free" signal in the car.

The **IN100 MINI** and **IN100 TAXI** have an EEPROM, programmable through the **IN-T1** interface and a PC with the **IN1007.EXE** and **IN100TAX.EXE** software.

DECO-100

The **DECO-100** is a multitone sequences decoder programmable from a PC computer. The modem is connected to the PC's serial port. The incoming calls are shown in the computer monitor and are stored in files with the date and time of reception. The set includes: Programming and operation software, DECO-100 modem, in "Eurocard" laptop housing, and *null modem* connection cable.
