

SELECTIVE CALLING - MULTITONE SYSTEMS

The selective calling multitone system of **SEÑALIZACION Y TELECONTROL**, is composed of the mobile module **IN-200** and the semiduplex modem **CENTRAL**.

IN-200

- Multitone norms: CCIR, EEA, ZVEI1, ZVEI2, ZVEI3 and NATEL.
- Five encode sequences: PTT, PTT plus status, emergency, TX call and transponder.
- Each encode sequence contains one or combination of 6 independent packets; allowing protected repeater access, ANI...
- Control of RX audio.
- Individual or group calls.
- Five RX remote functions: Stun and released, transpond, output control and reset.

These parameters are programmed with the interface IN-T1 and an IBM compatible computer and the specific programming software.

Modem CENTRAL

The operation programme **CENTRAL.EXE** allows two running modes:

- **OPERATOR LEVEL MODE:** It classifies and records the incoming calls depending on their status: PTT plus status, PTT without status, emergency and TX call.
- **SUPERVISOR LEVEL MODE:** It allows to send the five remote functions, make selective and group calls and arrange the received calls in the appropriate status window.

The set includes: Programming and operation software, semiduplex modem "Eurocard" lap top housing and a *null-modem* connection cable.
